---

We SDAC InfoTech established in 2004 and started dealing with Corporate Training and Software Development. We as an I.T firm Committed to provide Quality Training for Open Source Technologies like Java, Software Testing, Android and Digital Marketing.

**SDAC stands for "Software Development in Advanced Computing" .**

We are having over 10 years of software development and service providing experience on various Technologies and Platforms. SDAC InfoTech is formed by strong team of technocrats.

**Head-Quartered at Navi Mumbai (Airoli)**

**We have branches at Thane | Malad | Bhayander**

## Why Choose SDAC?

### 1) Get Trained From I.T Firm

We are not computer training center our computer station. We are I.T. firm who has training outlets across Mumbai.

**"Learn from developers to become a developer."**

**"Learn from tester to become tester."**

### 2) Our Mission is Making Nation Employable

We provide 100% placement assistance.

We have tie up with 150+ top most MNC including Indian I.T firm.

### 3) Quality Our Passion

We run skill oriented program depending on the recommendation and survey of top most I.T Company and we conduct session by using modern methodology.

## SDAC DevOps Android

---

A New Trend has been introduced in I.T. these days that is DevOps. First of all DevOps is not a title/job/profession, DevOps is a culture. A healthy culture of organization's Dev and Ops guys to cooperate with each other. DevOps aims to unify software development (Dev) and software operation (Ops).

We at SDAC provide DevOps inherited courses in order to make our candidate market ready.

DevOps is useful to increase your market value as this trending culture has higher demand in modern market because of its versatility.

### **DevOps culture is talking about:**

**Engineers empowerment** - by giving engineers more responsibility over the whole application lifecycle process. (dev -> test -> deploy -> monitor -> be on call)

**Test Driven Development** - write tests before you write code. Unit tests, integration tests, system tests. This will help increase the quality of your service and give you more confidence to release faster and more frequent.

**Automation** - automate everything that can be automated. Test automation, infrastructure automation (infrastructure as a code), deployment automation, etc..

**Monitoring** - monitor your apps, build monitoring alerts well. It should save your time, don't flood with metrics and alerts.

**Self-service** - provide a self-service for any framework that you build or anything that you do. Don't be a bottleneck.

**People** - but most importantly its talking about people culture that should be open minded, transparent, egoless, professional, with "can do" attitude.

## Take Away

After completion of this course you will be able to

- Create a Desktop based Application
- Create a Web based Application
- Skill to use a pre-built framework for rapid application development
- Create Enterprise application without using complex technologies like Struts, Spring application server

## World Class Curriculum designed by SDAC

Course	Sub Course	Description
DevOps	Introduction to DevOps	Basically we provide basic introduction to DevOps culture which recently industries are adopting.
Fundamentals of OOPs		Object oriented programming is the base of Java. This is very important to understand properly. We provide separate session for OOPs before moving towards Java.
Core Java	Object Oriented	Object Oriented Programming (OOPs) are used for developing simple java applications.
	Desktop Based Application	Client based simple desktop based applications.
XML	XML Introduction	What is XML open link, XML Features, HTML vs. XML, XML Example, XML Technologies, XML Attributes, XML Comments, XML Tree
	XML Validation	XML Validation, XML DTD, XML CSS, XML Schema, DTD vs. XSD, CDATA vs. PCDATA
	XML Advance	XML Parsers, XML DOM, XML Database, XML Namespaces
RWD	HTML	Html is used for Designing the structure of the website.
	CSS	CSS is used for Designing the look and feel of website.
	JavaScript	JavaScript is used for Giving form, password validations also animations.
	JQuery	JQuery also used for Giving form, password validations also animations but they are Built-in JavaScript Libraries.

Android	Study of Android	Android Basic, Android Development , Android-User Interface , Activity and Intent using Fragments and the Action Bar , Android menu , Android Services, Broadcast Receiver and Notification Manager, Android Multimedia, Android Sensor and Touch, Android Location API and Google Map, Android Speech, Android Telephony, Android file and network access, Android Web Services,
	Project	Project on Android for mobile based Application
Interview	Interview preparation	Technical Preparation
		Soft Skills Preparations
		HR Round
Placement Assistance		Placement Procedure Starts

## Key Features about us

- 100 % Good job assistance
- Interaction with Industry Experts
- Batches will be Taken by Developers/Programmers
- Small Batches to focus on each student
- We mainly focus on practical classes rather than theoretical classrooms.
- You will get a chance to involve in live project.
- We provide Training letter/Certificate on Training completion.
