---

We SDAC InfoTech established in 2004 and started dealing with Corporate Training and Software Development. We as an I.T firm Committed to provide Quality Training for Open Source Technologies like Java, Software Testing, Android and Digital Marketing.

**SDAC stands for "Software Development in Advanced Computing" .**

We are having over 10 years of software development and service providing experience on various Technologies and Platforms. SDAC InfoTech is formed by strong team of technocrats.

**Head-Quartered at Navi Mumbai (Airoli)**

**We have branches at Thane | Malad | Bhayander**

## Why Choose SDAC?

### 1) Get Trained From I.T Firm

We are not computer training center our computer station. We are I.T. firm who has training outlets across Mumbai.

**"Learn from developers to become a developer."**

**"Learn from tester to become tester."**

### 2) Our Mission is Making Nation Employable

We provide 100% placement assistance.

We have tie up with 150+ top most MNC including Indian I.T firm.

### 3) Quality Our Passion

We run skill oriented program depending on the recommendation and survey of top most I.T Company and we conduct session by using modern methodology.

## SDAC DevOps Software Testing

---

A New Trend has been introduced in I.T. these days that is DevOps. First of all DevOps is not a title/job/profession, DevOps is a culture. A healthy culture of organization's Dev and Ops guys to cooperate with each other. DevOps aims to unify software development (Dev) and software operation (Ops).

Software Testing DevOps is simply applying DevOps to Java software development. That means that different teams are no longer needed when creating an application. In Software Testing DevOps you not only test software but also understand basic logic behind any software so as to make them faster and efficient.

We at SDAC provide DevOps inherited courses in order to make our candidate market ready. DevOps is useful to increase your market value as this trending culture has higher demand in modern market because of its versatility.

### **DevOps culture is talking about:**

**Engineer' s empowerment** - by giving engineers more responsibility over the whole application lifecycle process. (dev -> test -> deploy -> monitor -> be on call)

**Test Driven Development** - write tests before you write code. Unit tests, integration tests, system tests. This will help increase the quality of your service and give you more confidence to release faster and more frequent.

**Automation** - automate everything that can be automated. Test automation, infrastructure automation (infrastructure as a code), deployment automation, etc..

**Monitoring** - monitor your apps, build monitoring alerts well. It should save your time, don't flood with metrics and alerts.

**Self-service** - provide a self-service for any framework that you build or anything that you do. Don't be a bottleneck.

**People** - but most importantly its talking about people culture that should be open minded, transparent, egoless, professional, with "can do" attitude.

## Take Away

After completion of this course you will be able to

- Create a Desktop based Application
- Create a Web based Application
- Skill to use a pre-built framework for rapid application development
- Create Enterprise application without using complex technologies like Struts, Spring application server

## World Class Curriculum designed by SDAC

Course	Skills	Description
DevOps	Introduction to DevOps	Basically we provide basic introduction to DevOps culture which recently industries are adopting.
Employability	C	Programming logic building using C language. Most of the industrial aptitudes are carried out on C programming.
	SQL	Connecting with the RDBMS which is useful for desktop as well as web application. Also aptitudes are carried out on the basis of SQL
	Aptitude	Preparing candidate for interview aptitudes.
OOPs		Object oriented programming is the base of any programming language. We provide separate session for OOPs before moving towards Java/Android/Software Testing.
Core Java	Object Oriented	Object Oriented Programming (OOPs) are used for developing simple java applications.
	Desktop based Software Application	Client based simple desktop based applications designing.
RWD	HTML	Html is used for Designing the structure of the website.
	CSS	CSS is used for Designing the look and feel of website.
	JavaScript	JavaScript is used for Giving form, password validations also animations.

	JQuery	JQuery also used for Giving form, password validations also animations but they are Built-in JavaScript Libraries.
	Angular	Angular is advanced version of CSS and JS with high functionality. We provide overview of Angular.
	Bootstrap	Bootstrap is advanced version of CSS and JS with high functionality for any device compatibility.
<b>Manual Testing</b>	Logic Building	Basic Logic building of software testing and learning to test manually
	Manual Testing	
	Project	
<b>Automation Testing</b>	Test link	Study of various Testing tools.
	Bugzilla	
	Selenium IDE	
	JMeter	
	Mentis	
	Jira	
<b>Selenium WebDriver</b>		
<b>Interview Preparation</b>	Interview preparation	Technical Preparation
		Soft Skills Preparations
		HR Round
<b>Placement Procedure</b>		Placement Procedure starts

## Key Features about us

- 100 % Good job assistance
- Interaction with Industry Experts
- Batches will be Taken by Developers/Programmers
- Small Batches to focus on each student
- We mainly focus on practical classes rather than theoretical classrooms.
- You will get a chance to involve in live project.
- We provide Training letter/Certificate on Training completion.
